

## eFilm v4.0 System Requirements

### Supported Operating Systems

- Windows 8 – Pro, and Enterprise
- Windows 7 - Home Premium, Professional, Enterprise and Ultimate (32 or 64-bit)
- Windows Vista - Enterprise, Business and Home Premium Editions
- Windows XP Professional (SP2).

\*\*Windows 10 is known to function, but is not currently supported by Merge Healthcare:

-New Installation Requires eFilm v4.0

-Upgrade from Windows 7 or Windows 8 to Windows 10 – v3.3 and v4.0

### Required Hardware

To get the most out of eFilm, Merge Healthcare recommends that your computer meet the following specifications:

- Pentium 4-class processor
- 4 GB RAM
- 40 GB free hard drive space (1 GB for installing eFilm and 39 GB for image storage)
- Display resolution 1280 x 1024 with 32 bit/true color

### For 3D Volume Rendering

- Video Card with at least 128 MB video
- RAM that fully supports DirectX 8.1 or higher

When choosing computer hardware, users should note that the most substantial performance gains result when RAM is increased. To prevent poor software performance, Merge Healthcare does not recommend that eFilm be run on a less powerful system than that listed above. Hard drive space should be added as image storage requirements increase.
